Education

Cavite State University Cavite City Campus Pulo II Dalahican, Cavite City
Bachelor of Science in Information Technology September 2026
Thesis: Developed a Website for Holy Trinity Christian Community Church
Relevant Coursework: Web Development, Database Systems, Software Engineering, Data Structures & Algorithms
Honors: Dean's List, Academic Scholarship, Cum Laude

Experience

Department of Environment and Natural Resources MIMAROPA Regional Office PITX 3rd Tower, Parañaque
Application Developer *(Intern)* February 2026 – April 2026

- Integrated **RESTful APIs using Laravel**, handling data exchange and system functionality
- Improved system usability through **UI/UX enhancements, dashboards, and role-based access control**
- Contributed to **AI-powered report and ticket generation**, improving efficiency and reducing manual work

Projects

Website of Holy Trinity Christian Community Church *(Thesis Project)*
Tech Stack: Native PHP, CSS, HTML, JavaScript, MySQL

- Developed a dynamic, live church website with an integrated **appointment booking system and live mass streaming**, improving accessibility and user engagement
- Built and implemented event posting, announcements, and a responsive gallery with content management, enabling real-time updates and easy media handling

OJT Attendance Management System *(Internship Project)*
Tech Stack: Native PHP, JavaScript, MySQL, REST API, HTML, CSS

- Developed a web-based attendance management system with time-in/time-out tracking, automated records, and **photo capture verification with API-based authentication**
- Built features for **PDF report generation and admin dashboards**, improving monitoring, accuracy, and documentation efficiency

Technical Assistance Ticketing System *(Internship Project)*
Tech Stack: Laravel, PHP, Vue.js, JavaScript, MySQL, REST API, Postman, Git

- Developed a web-based technical assistance ticketing system for managing service requests and tracking resolutions, and **AI-assisted features** to improve accuracy and efficiency
- Improved system performance and usability through **dashboard design, data filtering, and asynchronous data handling**

Skills

- **Programming:** PHP, JavaScript, Python
- **Framework & Libraries:** Laravel, Vue.js
- **Web Development:** HTML, CSS
- **Database:** MySQL
- **Tools & Technologies**: Git, Postman, REST API Integration, AI Integration, UI/UX Design, PDF Report Generation
